

Butterfly Valve Grooved End

General Description

Lansdale Valve Grooved End Butterfly Valves are indicating type valves designed for use in fire protection systems where a visual indication of open or closed valve condition is required. They are used, for example, as system, sectional and pump water control valves. They have grooved inlet and outlet connections that are suitable for use with grooved end pipe couplings listed or approved for fire protection systems.

For applications requiring supervision of the open or closed state of the valve, the Gear Operators for the Butterfly Valves feature two sets of factory installed internal switches each having SPDT contacts (Ref. Figure 3). The supervisory switches transfer their electrical contacts when there is movement from the open or closed disc position during the first two revolutions of the handwheel.

NOTICE

Lansdale Valve Grooved End Butterfly Valves described herein must be installed and maintained in compliance with this document, as well as with the applicable standards of the National Fire Protection Association, in addition to the standards of any other authorities having jurisdiction. Failure to do so may impair the performance of these devices.

The owner is responsible for maintaining their fire protection system and devices in proper operating condition. Contact the installing contractor or product manufacturer with any questions.

Technical Data

Approvals

UL Listed
FM Approved
CE Certified
VdS Approved
Russian Fire Certificate
CNPP R1 Listed-APSAD
Listed by California State Fire Marshall

Refer to Tables A, B and C for applicability.

All laboratory listings and approvals are for indoor and outdoor use.

Sizes

2–12 Inch (DN50–DN300)

UL/FM Maximum Working Pressure

2–8 Inch (DN50–DN200) 300 psi (20,7 bar)
10–12 Inch (DN250–DN300) . . . 175 psi (12,1 bar)

VdS Maximum Working Pressure

2–8 Inch (DN50–DN200) 300 psi (20,7 bar)
10 Inch (DN250) 232 psi (16,0 bar)
12 Inch (DN300) 175 psi (12,1 bar)

Maximum Working Temperature

212°F (100°C) in accordance with UL 1091

Materials of Construction

Body Ductile Iron
Body Coating RILSAN PA11 Black
Disc Ductile Iron
Disc Seal EPDM Encapsulated
Upper & Lower Stem Stainless Steel
Handwheel Ductile Iron
(BFV-300 red painted; BFV-300C black painted)
Actuator, 2–6 Inch (DN50–DN150):
• IP 65, bronze traveling nut gearbox, ductile iron housing
Actuator, 8–12 Inch (DN200–DN300):
• IP 65, brass segmented gearbox, ductile iron housing

Silicone Free Model Availability

Silicone free models are available.
Contact Lansdale Valve sales for information.

Tapping Bosses

Two factory plugged NPT threaded tapping bosses in the valve body are located on the up and downstream sides of the disc for connection to valve trim. Tapping boss sizes:

2–3 inch (DN50–DN80) 3/8 NPT
4–12 inch (DN100–DN300) 1/2 NPT

Control Valve Seat Leakage

Installation

Grooved End Butterfly Valves may be installed with flow in either direction and can be positioned either horizontally or vertically.

The grooved end pipe couplings used with the must be listed or approved for fire protection service and installed in accordance with the manufacturers instructions.

Butterfly Valve may be installed with any schedule of pressure class of pipe or tubing that is listed or approved for fire protection.

Conduit and electrical connections are to be made in accordance with the authority having jurisdiction and/or the National Electrical Code. With reference to Figure 3, the supervisory switch is intended for connection to the supervisory circuit of a fire alarm control panel in accordance with NFPA 72. The auxiliary switch is intended for the unsupervised connection to auxiliary equipment in accordance with NFPA 70, National Electric Code.

NOTE: For outdoor applications with internal supervisory switches, it is recommended that wiring connections be made at a temperature above 15°F (-9°C), in order to insure sufficient flexibility of the wire lead insulation.

Care and Maintenance

Before closing a fire protection system control valve for maintenance or inspection work on either the valve or fire protection system which it controls, permission to shut down the affected fire protection systems must be obtained from the proper authorities and all personnel who may be affected by this decision must be notified.

The owner is responsible for the inspection, testing, and maintenance of their fire protection system and devices in accordance with the applicable standards of the National Fire Protection Association (e.g., NFPA 25), in addition to the standards of any authority having jurisdiction. Contact the installing contractor or product manufacturer with any questions. Any impairment must be immediately corrected.

It is recommended that automatic sprinkler systems be inspected, tested, and maintained by a qualified inspection service.
